

Workshop

Getting started with Product Environmental Footprint

Overview:

The European Commission's recently launched Environmental Footprinting initiative is designed to harmonize the many different methodologies available to calculate and communicate environmental information for products and organisations. This workshop will provide LCA practitioners (not necessarily GaBi users) with an overview of the new environmental footprinting framework for products, how it will affect existing LCA work and how to implement it in the existing LCA routine.

This course will be interactive to openly discuss and reflect your position and will enable you to deepen your understanding of key aspects of the initiative and trends that may drive and define businesses in the future.

Detail:

I - Context of Product

Environmental Footprint including

- Status quo of PEF pilot phase
- Synergies and differences between ISO 14044 and Product Environmental Footprint guide.

II - Inventory requirements

- Data quality / primary –secondary data
- End of Life calculations

III - Impact Assessment

- Robustness of proposed impact categories
- Discussion of proposed impact assessment methods
- Implications for data collection and inventories

IV - Developing roadmaps for PEF

- Implementation and roll-out of PEF guidelines
- Role of Product Environmental Footprinting Category Rules PEFCR.

Language: English

When: 6 November 9:30 – 12:30 (coffee break are included)
